

T.Rodon PTT Group Calls

1. Select the top left Groups tab. In the example below, the Main group is selected. The dispatcher at any time can press the **PUSH TO TALK** button at the bottom to speak to all the users in that group. The **PUSH TO TALK** button displays the group name on the left and the user who last spoke on the right. At anytime, the dispatcher can select and speak into any other group in the list. Note the dispatcher can only speak to one group at a time.
2. The dispatcher can also listen to multiple groups at the same time from the list simply by right-clicking on a group and selecting **Listen** from the pop-up menu. In the example below, the dispatcher is listening to both Main and Test group simultaneously as indicated by the blue speaker icon. The dipatcher can also mute any channel by right-clicking and selecting **Mute** from the pop-up menu.
